Chapter 1

Introduction

The book is a compilation of different, useful and not, lections from the university. The main reason is to create a book, which will be staying on a shelf, and collecting dust. My relatives are saing that the university will be useful and knowledge isn't something you will be carign on my back. I want to prove that it is not a true. The main theme of the book is math and cryptography. Hovewer, there will be a lot of monothone useless chapters of some unrelated subjects, only because it was easy to append. If one want to read a useful book on cryptography, just google some other or choose "The graduate course in cryptography" of Boneh et.al. [BS15]. It is a good book.

Bibliography

[BS15] Dan Boneh and Victor Shoup. A graduate course in applied cryptography, 2015.
